Kanya Wongsiri

Backend Developer — Go and PostgreSQL

kanya.w@example.com · +66 00 000 0002 · Chiang Mai

Summary

Backend developer with three years of Go, building internal tools and APIs for a retail company. Comfortable with PostgreSQL; looking to work on larger systems.

Experience

Backend Developer, Demo Retail Group — 2023 – present

- Maintain the stock and pricing APIs, written in Go, used by 40 stores.
- Write PostgreSQL queries and migrations for the inventory database.
- Packaged the services as Docker images with Docker Compose for local development; production still runs on a single virtual machine.
- Set up a basic GitHub Actions pipeline that runs the tests on every pull request; deploying is still a manual shell script, with no monitoring beyond the server's logs.
- Added a small RabbitMQ queue so price updates reach the stores without polling; no Kubernetes or larger messaging experience yet.

Junior Developer, Placeholder Studio — 2022 – 2023

- Wrote Go services for a booking website and fixed bugs in its PHP front end.
- Added PostgreSQL indexes that halved the search page's load time.

Skills

Go (3 years), PostgreSQL, Docker, Docker Compose, RabbitMQ (basic), GitHub Actions (basic), REST APIs, Git, Linux, PHP

Education

B.Sc. Information Technology, Example Northern University, 2022
